

## Viper Networks Completes Pilot Project in Sri Lanka

Troy, MI, December 17, 2024 – Viper Networks (OTCPK: VPER) announced the completion of its pilot smart city project in Colombo, Sri Lanka. The company deployed 108 of its smart poles along the Justice Akbar Mawatha Flyover in the country’s capital city, Colombo, showcasing its streamlined small smart pole design and efficient LED lights.

“The project is a significant milestone for Viper’s smart city business sector,” said Farid Shouekani, Viper’s Chairman. “We are currently developing several follow-on projects of substantially larger size in the market following the successful implementation of the pilot project. Viper management intends to continue to invest in projects in Sri Lanka.”

Viper recently adopted its “Everything Wireless” strategy for both the telecommunications and energy sectors, which includes mobility, fixed wireless, Over-the-Top (“OTT”) technologies, smart city and green generations projects. The pilot project was intended to demonstrate Viper’s capabilities in the segment, improving the supply chain and testing profitability metrics.

The company is in the final stages of selecting the location of its United States pilot, which will feature a larger, more scalable platform. “We intend to equip Viper’s future projects with an intelligent radio access platform that leverages the recent acquisition of 1stPoint Communications and its subsidiaries,” said Erik Levitt, Viper’s CEO. Future platforms will include both 5G capable radios, lower band radios for delivering smart city technologies and municipal Wi-Fi services.

Pictures of the deployment are available on the revised Viper web site at:
